INTRO CENTRA

CENTRA STANDS FOR HIGH TECH SIGHTS – HANDMADE IN GERMANY.

centra is headquartered in Rheinfelden, Germany, and has built an international reputation based on its passion for perfect solutions and a proven talent for technical innovation. It all started more than half a century ago, when our company founder, Helmut Brunner, developed his first iris diaphragm in 1958.

Today, we are a state-of-the-art manufacturer that uses cutting-edge CNC and laser equipment to produce high-precision parts. However, assembly work is still carried out by hand – our team and its passion for precision and quality is our greatest asset.

What makes our company really stand out is the way we combine in-house development and production with our own personal experience of top-level sport. What's more, we work closely with the best shooters and coaches in the world. This collaboration is a constant source of inspiration and drives us to innovate and deliver high-tech products that are "Made in Germany".

Our partnership with MEC in Dortmund is founded on the personal friendship between Maik Eckhardt, Heinz Reinkemeier and myself. For us, this partnership is fundamental to the joy that we take in our "work" and it is also the foundation for our success.

It gives us great pride that we can help in some way as you pursue your chosen sport.

The centra team,
Johann Zähringer

INTRO MEC

3 LETTERS – 1 AIM: YOUR SPORTING SUCCESS!

I am a sport shooter and managing director of MEC High Tech Shooting Equipment, which is based in Dortmund, Germany. As a focused businessman, I make full use of my many years of experience in international sport to offer our customers truly outstanding products. We also have our own, successful team of shooters and work with other top athletes from around the world. As a result, we are in the perfect position to develop innovative ideas that are rooted in practical experience and result in high-end shooting equipment. All these developments are put through extensive testing at our in-house shooting range before they go into series production at precision engineering plants. Each and every product has to prove itself in training before it can be released for manufacture.

centra and MEC products complement each other perfectly. But that's not really surprising, since they are based on similar corporate philosophies – both companies give top priority to the quality and precision of their products, two things that very often decide between victory and defeat in a match.

While Rheinfelden has become the home of sight technology, here in Dortmund, we've focused on all things related to the stock. That's why it became clear that the best way to present our portfolio was to combine our ranges...

If you have any questions or requests, we're always here to help. On behalf of everyone at MEC, I'd like to wish you "good shooting" and we hope you enjoy browsing through our latest catalogue.

Maik Eckhardt,
Managing director

Compact high-precision rearsight

- Now available in black and silver
- With new reworked clamping mechanism
- Extremely low, slim and compact
- Allows clear view over the housing, enables pre-aiming in the standing position
- Allows clear view of wind flags
- Offers approx. 20 clicks inside the air rifle 10 ring
- Includes Block 4 front sight raiser and antiglare tube, iris not included

ANSCHÜTZ TELESCOPE KK50 4 - 12X44 AO

- Multicoated lenses
- 1 click 1/4 Moa, 3,65 mm to 50 m
- High Rise Mounting Rings for dovetails from 9-11 mm
- Parallax compensation from 9 m to infinity
- Weight: 582 g

19077774

RRP in Euros: 199.00

MEC TELE SCOPIC

- Rail that allows adjustment of scope position
- The rail can be tilted from 50 m to 100 m, thus minimising necessary adjustments to the scope
- Reinforces a system that has been weakened around the loading aperture
- Overall length: 250 mm
- Overall height: 30 mm
- Weight: 305 g
- Compatible with all standard match guns

5031064

RRP in Euros: 219.00

REVOLVE

- Can be retrofitted to Monocle
- Tool-free adjustment
- 360-degree rotation enables perfect lens adjustment

5028266

RRP in Euros: 98.00

Picture shows MEC Monocle Revolve on Diopter Spy.
Special items: Spy, sight 1,8 Basic with Optic and Monocle Index.

MEC GLAS MONOCLE REVOLVE

- 360-degree rotation enables perfect lens adjustment
- Tool-free adjustment

5028267

RRP in Euros: 149.00

Similar to picture.
Subject to technical changes.

MEC HANDLE

- New hand rest for supported shooting
- Can be retrofitted to all Mark I stocks
- Supports a more relaxed stance
- Reduces gun movement
- Available in 3 designs

5030968	MEC Handle KK	RRP in Euros: 198.00	
5030969	MEC Handle KK Protect	RRP in Euros: 130.00	
5030970	MEC Handle LG	RRP in Euros: 109.00

5030966	225 g	RRP in Euros: 99.00

MEC PROJECT STOCKS WITH 2 HOLDERS THE CLASSIC IS BACK!

MEC PROJECT

- Uncompromising in production, functionality, anatomy and design
- Compatible with following systems:
 - Anschütz 1913
 - Bleiker Challenger
 - Bleiker big-bore
- Grip offers virtually unlimited movement thanks to ball joint
- Custom advice and one-off production
- Adjustable configuration

Project + Info

RRP in Euros: 2190.00

MEC PROJECT EVOLUTION

- System mount based on 2 clamping elements
- 2 adapters and various tightening torques
- Unique oscillation action
- Compatible with following systems:
 - Anschütz 1913
 - Anschütz 2013
 - Walther KK300
 - Bleiker Challenger
 - Feinwerkbau 2700
 - Grunig Racer

FREE POSITION II

Butt plate for Super-Match and sport guns

- Improved shape with grooving
- Steel wing holders
- Improved centre block
- Virtually unlimited adjustment options
- Wing elements allow it to be positioned up high, at an angle and support rotation around the axle
- Fits all current smallbore sport rifles

5030466

RRP in Euros: **359.00**

MEC CONTACT IV LIGHT

Reduce to the max

Compared to the Contact IV, the light version dispenses with the double joints. This greatly simplifies handling without significantly limiting the range of adjustability.

- Height adjustment is fine-tuned with a hand-operated screw
- Diverse adjustability options
- Interchangeable wings
- Perfect adhesion thank to natural rubber knobs
- Can be enhanced, e.g. with the "CIV full package"

5030605

RRP in Euros: **299.00**

THERMOUCHE SHOOTING UNDERWEAR

Shooting underwear with the double climate effect.

The first effect arises from the utilisation of the Outlast® technology where phase Change materials (PCM) are used which are able to take up warmth, store it and release it again to achieve an optimum moisture and temperature management.

The second climate effect occurs from the sandwich construction of the warp knitted fabric. Two layers of fabric, held by monofilament threads at a distance, form an insulating layer of approx. 1.5 mm thickness. This serves at the same time as a rallying buffer for perspiration.

The undergarment is responsible for the microclimate beneath the thick, barely breathable shooting clothing. When the body temperature rises due to overheating, it can also increase the pulse rate and blood pressure of the shooter and besides, affects negatively the eyesight. Thermouche with PCM technology is the only material that can cool the body actively. The shooter is not so hot, so he is perspiring less, but all the sweat vapor is distributed in the insulating layer and the skin and the thermouche underclothing feel dry.

Characteristics:

- Thermo regulation: Keeps the body cooler in hot weather and warmer in cold weather
- breathable and perspiration regulating
- Unbeatable good fit, almost wrinkle-free in all shooting-positions
- Machine washable - dries quickly
- Odorless
- Pleasant, visually beautiful flat seams that do not cause pressure or chafing at seam intersections

Fabric:

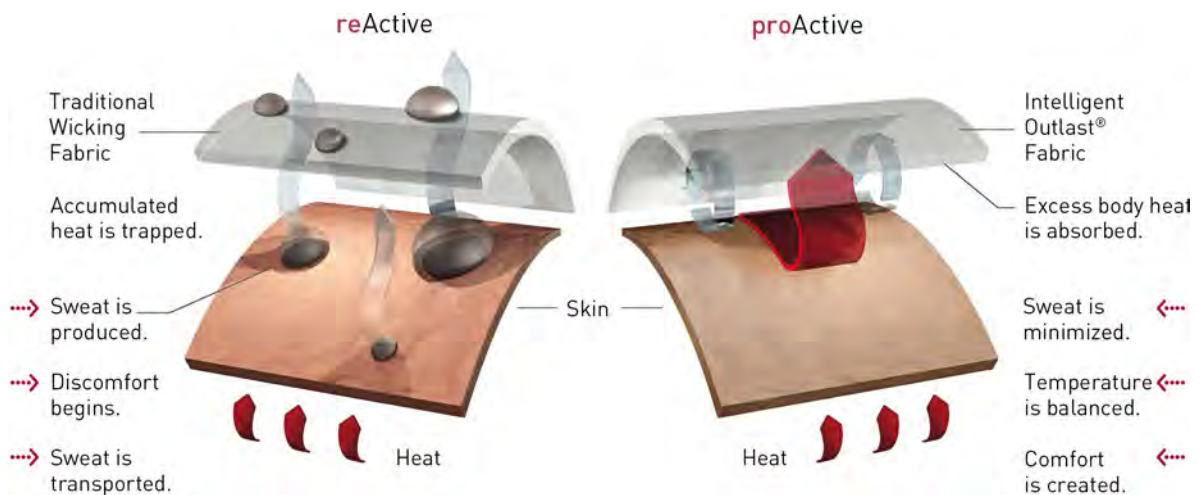

Fabric 1: 87 % Polyester (PES) / 13 % cotton (CO)

Fabric 2: 98 % Cotton (Co) / 2 % Elastane (EL)

Care:

Machine wash at 30 degrees, no tumbler, dry hanging or lying

Colour: white / blue

SWEATER THERMOUCHE

- Double layer as padding for the elbows, as well as the upper arms
- 2-way zipper
- The neck closed higher by stand-up collar
- Thin stretch in the crooks of the arms

C.G. MODELL 22 UNIVERSAL MATCH AND SPORT TRIGGER

The C.G. Modell 22 "Universal" Trigger has been designed by Robert Chombart

- Based on a common mechanism we call the Main housing, which is attached to Upperframes that are appropriate to the various modes of action that the C.G. 22 trigger is designed to support.
- True 2-stage trigger can be easily set for single stage
- CNC machined with wire EDM-cut tool steel levers, treated to 58-60 HRC
- Suitable for all fullbore competition pull weights

19T0000	Mainhousing	RRP in Euros: 160.00	
19T00002	Mainhousing with safety	RRP in Euros: 238.00	
19T00003	Mainhousing with bottomsafety	RRP in Euros: 229.00	
19T00004	Upperframe Rem 700	RRP in Euros: 140.00	
19T00005	Upperframe Tikka-Sako	RRP in Euros: 89.00

19T00009	Upperframe Accuracy Intl	RRP in Euros: 89.00	

GUIDE BLEIKER

Cleaning rod

- Prevents damage to chamber
- Protects your trigger mechanism from dirt and cleaning agents
- Synthetic

19C00203

RRP in Euros: 29.00

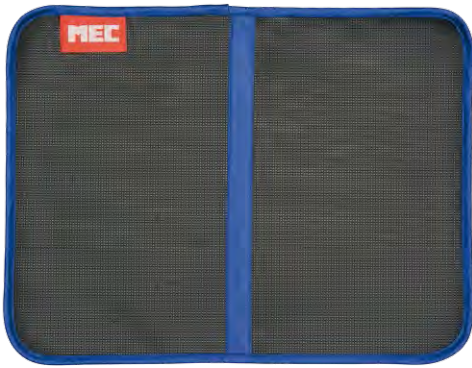

MEC CLASSIC TIN

- Metal tin
- Sandblasted look in silver
- Suitable for safely transporting the MEC Eagle Eye Change

- Also suitable for other small parts such as the Duplex-Insert

5001033

RRP in Euros: 8.50

MEC MAT

Stops gun, tool or ammunition from slipping and sliding when put down. Protects your gun from damage. The central reference stripe helps to improve your perception of the target when building up your position.

- Approx. dimensions: 43 cm x 33 cm
- One side smooth, the other semi-perforated

- Non-slip effect on both sides
- Target orientation stripe courtesy of Heinz R.
- ISSF compliant

5030626

RRP in Euros: 19.90

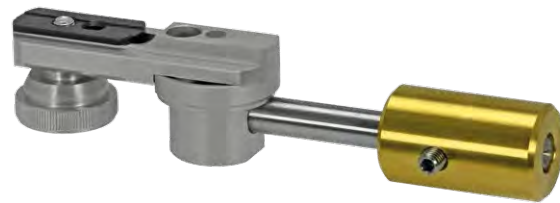

MEC WORKBENCH MAT

Gun workbench mat with semi-perforated coating and non-slip effect on both sides. Stops guns, gun parts, accessories and tools from slipping and being damaged during change-over and maintenance work. Also ideal for mobile use.

- Dimensions: 160 cm x 80 cm
- Semi-perforated coating
- Non-slip effect on both sides
- Drop protection

5030604

RRP in Euros: 79.00

LOCATOR

Mounting and adjustment unit for the SCATT aiming trace analysis system

- Fastens to the T-slot rail on the stock
- X/Y adjustment unit ensures the SCATT sensor can be accurately lined up with the target
- Axis displacement can be blocked

- The adjustment unit can be detached from the carrier rod and replaced with the additional weight included in the scope of supply. This ensures the gun has exactly the same weight and balance as when SCATT is mounted.

MICHAEL JANKER
European Champion AR 2012

COLOUR FILTERS

While fine-tuning your iris diaphragm helps to “sharpen” the target image, the right choice of filters will significantly improve contrast. The colour and coating on a filter will block certain spectral ranges – beams of specific wavelengths – as light passes through them. Depending on the properties of the filter lens, a filter will make the target image appear e.g. yellow, green or red (on a subjective basis).

This has a number of consequences:

1. Filters remove certain colours from the image and enhance others. Depending on the colour of the light, this changes contours and often improves contrast.
2. The resultant colouring usually has a subjective, emotional effect on the observer. Green is said to be calming, while red is associated with a stimulating effect.
3. In objective terms, there is evidence that filters improve a shooter’s perception of the target under certain conditions.

For example, you might find that you can see better under certain cloud conditions or in the evening light, because certain spectral ranges are being naturally filtered out. Artificial filters can intensify the target image and improve contrast in the same way. Indeed, our coloured lenses are designed to reproduce this effect on a systematic basis. There are also grey inserts and polarisers that can be used to reduce the amount of light, if necessary, and eliminate reflections.

If the result is unsatisfactory (too bright or poor contrast), that is when the filters come into play. If the target is too bright, you should start by testing the grey, C41-blue and brown filters. If the Sun is shining directly on the target, it is always a good idea to try out the brown filter.

In extremely bright conditions, you can combine it with grey levels or the polarisation filter. When trying to deal with such extreme situations, it can be helpful if your fixed/variable iris has two coloured filter wheels, one behind the other, so that two filters can be switched in series. Ideally a fixed iris should also have a polarisation filter.

A tip from the coach:

How to adjust the iris aperture and choose the right filters: When making adjustments, you should start off by looking at the target without any filters.

1. Adjust your iris aperture to its maximum size
2. While aiming at the target, slowly close the iris aperture until the front sight appears in perfectly sharp focus. Take a reading from the scale for the iris diaphragm
3. Adjust your iris aperture to its minimum size
4. While aiming at the target, slowly open the iris aperture until the front sight again appears in perfectly sharp focus. Take a reading from the scale for the iris diaphragm
5. Now adjust your iris aperture to the average of those two readings

TRAINER TIP

- 1
- 2
- 3
- 4
- 5
- 6
- 7

Centra has spent more than half a century researching and experimenting with light regulation **and is continuing to do so**. The result of all this work is a wide range of unparalleled high-precision optical instruments. Our latest development in the field of light regulation is our **Sight 1.8 Super AR** series of iris diaphragms. While our tried-and-tested, state-of-the-art precision iris diaphragm with 15 discs continues to deliver top performance in these products, the filters represent a leap forward in progress. All the filters feature a special **UV-400 coating** designed to eliminate the UV radiation that is perceived as glare. However, the real advance is the **super anti-reflection coating** on the filter lenses, which helps ensure maximum quality and transmission. This treatment improves light transmission significantly by up to 8 percent and prevents troublesome reflections.

OUR RECOMMENDATION:

Sight 1.8 Super AR II, 1.8 Twin, 1.8 Competition.

In cloudy, rainy, foggy or misty conditions, you can use contrast-enhancing filters: yellow, peach, orange, green, C41-blue, UV 400. Everybody’s eyes are unique, which is why everyone responds differently to varying intensities of light. It simply isn’t possible to formulate standard rules that apply across the board – using filters requires concentration and experience in trying out different approaches.

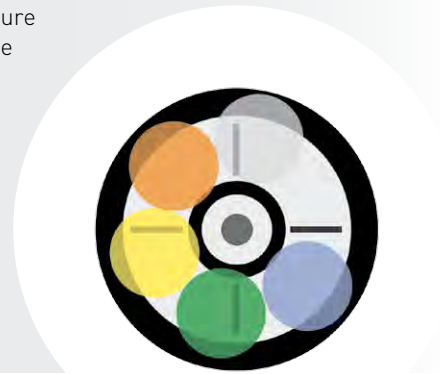

A tip from the coach:

The ideal time to adjust your sights is before you start taking sighting shots. Sit down at your firing point, get yourself comfortable and rest your rifle on a kneeling roll, then adjust your iris diaphragm, filter and the proportions of your front sight until you like what you see. When taking your sighting shots, you should only need to make minor adjustments.

After inserting or changing a filter, you must check your iris aperture and the diameter of your front sight. As a rule of thumb, you should find that you will need to enlarge your iris aperture and front sight when using a darker filter.

Interchangeable filters must be of the very highest quality. Only pure, perfectly ground glass will allow light to pass through it without any noticeable refraction, particularly in the case of the **Super AR lenses with a super anti-reflection coating**. This guarantees a clear view and stops your point of impact from moving when changing lenses.

Shooters are responsible for keeping their filters clean. Dust, humidity and temperature changes should be avoided, as they can cause cloudiness in the lenses. A filter insert should be thoroughly cleaned once a year.

FILTERS IN THE FRONT SIGHT TUNNEL

The vast majority of competitions are held using electronic scoring targets. These targets are extremely bright and often lit up from the inside, which means they produce very strong contrasts that our eyes have great difficulty processing. The mistake that shooters make most often in this regard is to try and reduce extreme brightness using dark grey filters near the iris diaphragm. This darkens the iris aperture, making it difficult to centre the front sight tunnel accurately. Every tenth counts, and we have therefore developed the **Polarizer single** and **Polarizer double** to tackle precisely this problem.

These filters darken the view through the front sight tunnel in order to counter the extreme brightness of the target while leaving the gap between the front sight tunnel and iris aperture bright, which is ideal for accurate centring.

In addition to polariser filters for dimming light, we have also developed contrast-boosting filters for the front sight tunnel – **Filters FS**, which also have a centre hole. In tricky light conditions, “secret weapons” like these can make all the difference.

For example, during one particular German Championship, the range at Munich-Hochbrück was shrouded in fog. Men, 60 prone, 8:00 a.m. We had just developed the **Filter FS** and two experts were using “the yellow”. One of them became German Champion and the other was runner-up – Maik Eckhardt and Johann Zähringer.

SPY CROMO BUILT TO LAST!

Every product we manufacture is made for more fun, more success and better results. A great deal of careful, high-precision work goes into our equipment, which is designed specifically for shooters who are aiming for the best.

The "Spy Cromo" is fashioned from a combination of exceptional materials. The chassis is made from stainless steel, while the tower – the core element for height

adjustment – is made of titanium. Titanium is a very special material that delivers enormous tensile strength but is still light in weight. For example, when shooting a big-bore gun and 6 mm BR from 300 m, the rear-sight is subjected to severe stresses and acceleration. That is why we developed a high-strength chassis and lightweight tower combination that can easily withstand such punishment. You only need hold it in your hands to realise the mechanical qualities and high-end build of this rearsight.

Optional accessory:
Duplex Vario

View from

DUPLEX

Aiming with micrometre peep sights and a front sight tunnel is an almost perfect solution. But even nearly perfect solutions can still be improved. In competitive sports, every point counts. Indeed the tolerances are tiny, particularly while aiming, when the front sight can become misaligned with the iris aperture. In fact, if the front sight is not perfectly centred in the iris aperture, the shot will miss the bullseye.

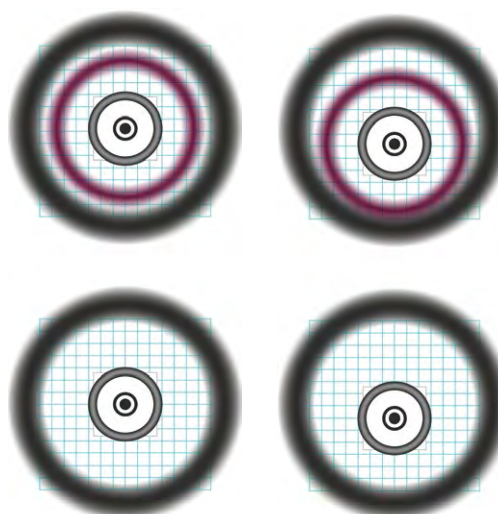

Shooters have to take the utmost care not to make a mistake like that. They need to make sure their eye is centred precisely on the rearsight iris on each and every shot. However, that is a very difficult thing to do, especially in challenging light conditions and over the course of long series.

The "Duplex" is an additional centring unit that doesn't place any extra demands on a shooter's concentration. The intermediate ring that it produces gives the eye an extra point of reference that provides a clearer indication of an alignment error. Integrating this additional ring concentrically into the sighting line was a real challenge.

The result is an X-Y adjustment-unit, the Duplex. Technology made by MEC & centra! When every tenth counts, the Duplex is the answer. The logical extension to the Duplex is the Duplex-Vario.

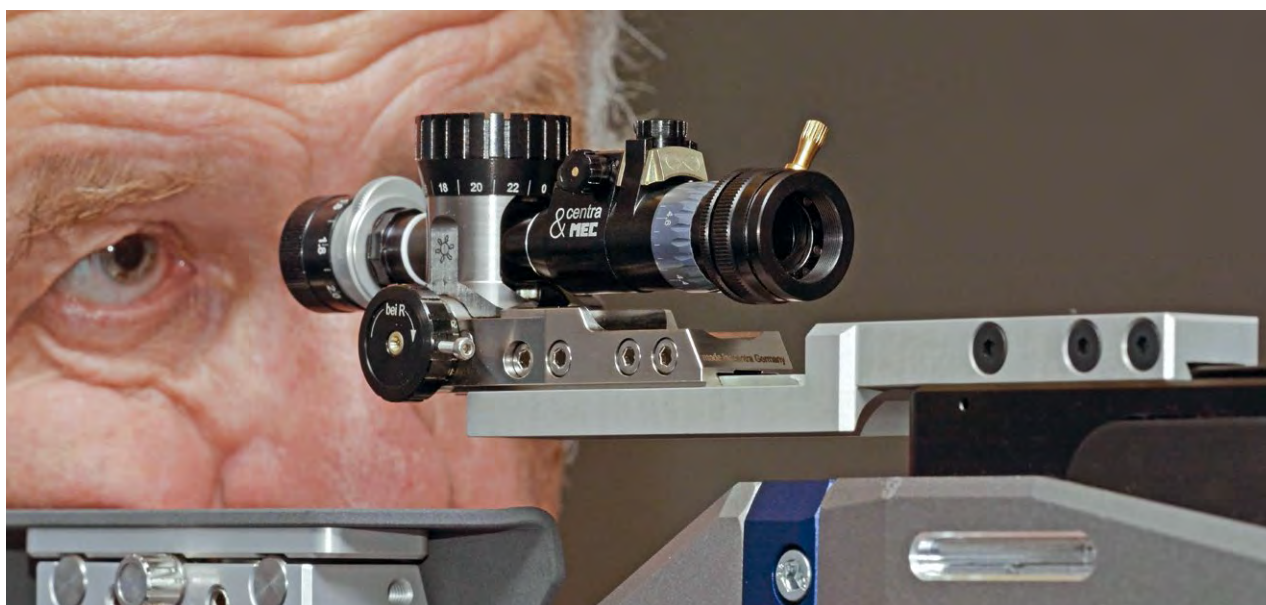

The centring ring is now variable and can be adjusted to suit personal requirements. Two adjustment ranges are available. The 3.4 – 4.4 range has been developed for rearsights with short anti-glare tubes, such as the SPY and FREE-SIGHT. The 3.8 – 4.8 range, meanwhile, is intended for use with rearsights that have long anti-glare tubes, such as Anschütz and FWB models.

The size of the centring ring should ideally be adjusted so that the light space [gap] between the iris aperture and the centring ring is relatively small. That way, the tiniest misalignments are immediately apparent and your

aiming becomes significantly more precise. If you need to readjust your iris aperture due to changing light conditions, or if you put a filter in place, you can also alter the adjustable centring ring of the Duplex-Vario to match – just as on an adjustable front sight ring. It is a solution that is convenient, but absolutely uncompromising. The alternative to the centring ring – whether a variable model or as a fixed Duplex-Insert – is the "Duplex-Iris". As a stepless adjustment system, it allows you to modify the gap between the front sight tunnel and iris aperture as required. If you close the Duplex-Iris so much that only a very narrow strip of light is visible around the front sight tunnel, you will be able to see every tiny aiming error.

The Duplex-Iris is a popular choice among indoor air rifle shooters. We recommend the Duplex-Vario for outdoor shooters who fire from 50 m and 100 m and who will benefit from having a clear view of wind flags and other indicators.

X-Y adjustment-unit to allow the attachment of an additional centring ring or iris

- Significant improvement of the aiming accuracy
- Minimises aiming errors
- Allows the attachment of individual centring ring sizes or an centring iris
- Individual adjustment of centring ring (iris) distance using stepless length shifts on the lens shade
- Compatible with the centra rearsight "SPY" and in combination with "Lenshood II" (MEC Free Sight, centra Sight Base, FWB rearsights and older Anschütz rearsights)

Shows Duplex on rearsight Spy long incl. optional extra Duplex Insert, Sight 1,8 Tiny

SIGHT 1.8 SUPER AR SIMPLY A NOTCH ABOVE!

The demands on shooters and equipment are getting tougher and tougher. In the World Cup, disciplines such as the air rifle and 60 prone have been switched to decimal scoring. In fact, in supported shooting, more and more shooters are reaching the maximum score. In the end, every decimal point counts!

Of all the various elements in shooting technique, aiming is one of the most elementary and yet also most sensitive aspects of the sport and makes the difference between a good and less than good score.

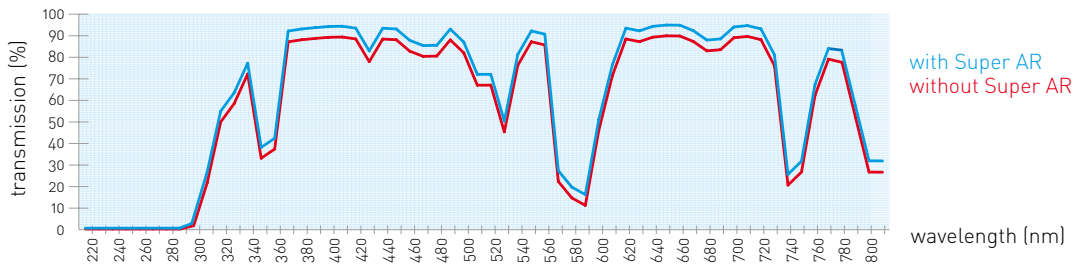

Our range of **Sight 1.8 Super AR** iris apertures takes sight technology to a whole new level. The iris is our tried-and-tested cutting-edge precision iris with 15 discs. It ensures a perfectly circular aperture across the entire adjustment range.

However, we have achieved a clear improvement in filters. Filter lenses are used to absorb harmful UV light and minimise disruptive light in the visible wavelength spectrum. Because the eye is most responsive to wavelengths around 550 nm, this range is filtered out as little as possible.

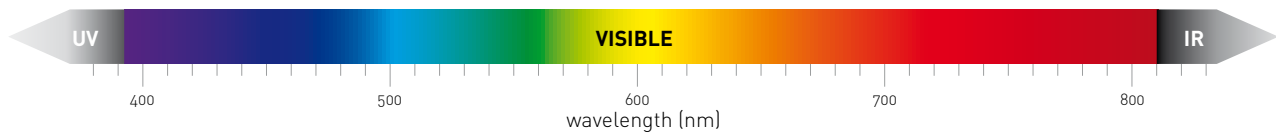

All the filters we are using at present are **UV-400 filters** designed to eliminate the UV radiation that is perceived as glare. Another important quality improvement is the **super anti-reflection coating** "AR with clean coat". This treatment improves light transmission significantly by up to 8 percent and prevents troublesome reflections.

The thread connection for the rearsight is made of **steel** and is interchangeable. For example, when using appropriate adapters, the Monocle can be fastened directly to the iris aperture or an additional rearsight optical system can be adapted. **Made for shooters who want the best.**

TRANSMISSION Filter: WL01

LIGHT SPECTRUM

SIGHT 1.8 SUPER AR I

- Iris aperture with integrated 5-colour filter
- Filter colours: ace amethyst, light grey, grey, yellow, peach
- UV-400 filter coating
- Super anti-reflection coating on filter
- Interchangeable steel thread adapter
- Colour: gunmetal / black

19205003

RRP in Euros: **198.00**

SIGHT 1.8 SUPER AR II

- Iris aperture with 10-colour filter and polariser
- Filter colours: ace amethyst, 4 grey levels, yellow, peach, red, green, brown
- UV-400 filter coating
- Super anti-reflection coating on filter
- Interchangeable steel thread adapter
- Colour: gunmetal / black

19205004

RRP in Euros: **279.00**

ADAPTER OK I

- Double thread adapter for use when the optical system on an iris aperture with optical system is to be removed and / or replaced

19906321

RRP in Euros: **80.00**

SIGHT 1.8 – PROFESSIONAL Basic / Indoor / Twin / Competition

Precision iris with 15 discs, interchangeable sight covers, insertable filter, polished coloured glass filters, individual colour filter variety available upon request. Integrated clamp element for covering the eye. Thread: M 9,5 x 1

-  Adjustment Iris
-  3 colour filter
-  5 colour filter
-  10 colour filter
-  Polarization anti reflection
-  Polarization bright / dark
-  Polarization bright / dark in front sight
-  Optic balance from -4.5 to +4.5 and 1.5 times magnification

SIGHT 1.8 BASIC

- Meeting the demands of an optimal adjustment range from 0.8 – 1.8 mm
- More exact contour of the optical centre
- Basic version
- Colours: silver (Si), black (S), blue (B), red (R)

19200001 + colour

RRP in Euros: 62.00

SIGHT 1.8 TWIN

- Iris aperture with a 10 colour filter designed for shooting indoors and out (Indoor-Outdoor combination)
- Filter colours: Light Gray, Gray, Dark Gray, C41 Blue, C41 UV, Yellow, Green, Orange, Brown and C41 Peach
- Colours: silver (Si), black (S), blue (B), red (R)

19201002 + colour

RRP in Euros: 153.00

SIGHT 1.8 COMPETITION

- Iris aperture with a 10 colour filter and an integrated polarization filter
- Filter colours are the same as those of Sight 1,8 Twin
- Colours: silver (Si), black (S), blue (B), red (R)

19202001 + colour

RRP in Euros: 177.00

SIGHT 1.8 PERFORMANCE

- Adjustable rear aperture with five (5) colour filters (C41 Blue, Grey, Yellow, Peach, and Brown) and a polarization filter.
- Front sight tunnel polarization filter insert.
- In combination this system produces optimal sight picture contrast and is infinitely variable for eyes, lighting and range conditions.
- Sight alignment clarity and contrast around the front sight tunnel in the rear sight remains bright and sharp

19203001 + colour	M18
19203002 + colour	M22

RRP in Euros: 182.00

BIATHLONVISIERUNG SIGHT 1.8 BIATHLON

- Iris aperture with a 5 colour filter
- Special coverings for the aiming and the non aiming eye
- Filter colours: Light Gray, Dark Gray, Yellow, Green, C-41 Blue

19211001

RRP in Euros: 179.00

SIGHT 1.8 SENIOR

- Adjustable rear aperture specially made for "Senior Class" competitors
- Large numbers and unique knurled knob design for quick adjustments
- Integrated five (5) filter system in Light Gray, Gray, C41 Blue, Yellow and Peach
- To aid visual acuity a 1.5 magnification can be attached

19204001

RRP in Euros: 160.00

SIGHT 1.8 SENIOR WITH OPTIC

- Adjustable rear aperture specially made for „Senior Class“ competitors
- Large numbers and unique knurled knob design for quick adjustments
- Integrated five (5) filter system in Light Gray, Gray, C41 Blue, Yellow and Peach
- To aid visual acuity a 1.5 magnification can be attached
- Includes 1.5 magnification

19204002

RRP in Euros: 240.00

SIGHT 1.8 TINY

- Micrometre peepsight with a very small frontal profile specially recommended for use with the MEC Free Sight.
- Integrated five (5) filter system (Gray, Dark Gray, C41 Blue, Yellow and Peach)

19205001

RRP in Euros: 160.00

SIGHT 1.8 CRYSTAL

- Iris aperture short, compact and transparent
- Iris aperture with adjustment range 0.8 – 1.8 mm
- Very small and special frontal profile
- Recommended for rearsight Spy and Sight Base 10 – 50

19205002

RRP in Euros: 103.00

SIGHT BASIC STARTLINE

- Standard Iris-disc 0.8 – 1.8 mm
- Large, easy-to-read numbers
- Short design

19204003

MEC GLAS SYSTEM

If the vision in your aiming eye is not corrected as appropriate to your gun and discipline, you will often find aiming a strenuous and sometimes unsteady affair. Your aiming eye may also fluctuate between seeing either the front sight or the target centre in sharp focus, which can lead to a rapid deterioration in visual acuity.

This is often followed by the following problems:

- You start to hold for longer (i.e. longer aiming time up until you fire your shot) because your eye isn't seeing things the way it should.
- You have to break off your shots more often, which puts you under time pressure and causes your visual acuity to deteriorate even further.
- This affects your confidence and can cause you to mess up crucial shots.

In cases like these, shooting glasses are a good solution in almost all disciplines. Given that shooting glasses need to incorporate a whole range of functions in a very small space, they are a challenging piece of equipment to design well. First and foremost, they have to be light, gentle on the skin, comfortable and easy to adjust. In short – you shouldn't know that you're wearing them.

Shooting glasses from MEC are a complete modular system that helps shooters with poor vision to achieve the best visual acuity they can.

THE MEC GLAS SYSTEM

This system offers virtually any shooter in almost any discipline a custom solution that will meet his or her requirements and wishes.

SHOOTING GLASSES AND PERFECT POSITIONING:

- When in position, THE SHOOTER'S AIMING EYE should be looking directly through the optical centre-point of the lens.
- THE CORRECTING LENS must be oriented 90° horizontally and vertically to the sighting line and be as close to the eye as the anatomy of the head (eyebrow and eyelashes) will allow.
- The shooter or coach should check that THE LENS is correctly positioned before every shooting session.

**PROFI
TIP**

MONOCLE

Since the start of the 2014 season, the rules of the German Shooting Sport and Archery Federation (DSB) have allowed shooters to permanently mount a shooting lens (such as the MEC glas Monocle or MEC glas Revolve) on their rearsight. This applies to all classes and all competitions run by the DSB. It is not permitted under the rules of the ISSF.

The shooting lens holder **MEC glas Monocle** and **MEC glas Revolve** are mounted on the rearsight with the enclosed tool and using an adapter fitting, a rod holder with clamping mechanism, a support rod for the lens

holder and a lens holder, as shown in the picture. The shooting lens – as in the case of shooting glasses – should be positioned directly in front of the eye (see picture).

Our recommendation: As far as possible, it's best to consult an optician who specialises in shooting when deciding between shooting glasses and a monocle. Since the lens strength and the shooter's position (canting) play a key role, you should consider all your options carefully – it's all too easy to rush in and make the wrong choice.

GOOD QUESTION...

I AM AN ARCHER, CAN I USE SHOOTING GLASSES, TOO?

Yes, but you need to take a lot of factors into consideration, and the devil is in the detail.

Firstly, it's important to know what lens strength you need and what kind of environment you will be in – do you shoot indoors or outdoors? Do you take part in static disciplines or do you shoot on a course? There are a whole host of questions, all of which can be answered with one simple system

THE MEC GLAS SYSTEM.

Various models with a range of nosepieces offer a wide selection and are sure to contain the perfect solution for your specific needs.

MEC GLAS FRAME GLASSES

The MEC glas frame glasses captivates with its material mix of titanium / aluminum / stainless steel and is also equipped with the MEC glas quick-link. Just like with the MEC glas frame glasses ultra light this frame offers the quick-link to incorporate the MEC glas support system and blinder, giving the user flexibility on the highest level. Again, all elements of this frame can be easily and steadily adjusted allowing the user precise adjustment for each shooting position.

The length adjustable side pieces have spring hinges and comfortable silicone sport ends to offer the user great comfort. Through their anatomically formed ends. Upon desire you may use the Ultra light with all current MEC glas nose pieces and MEC glas blinders.

MEC GLAS FRAME GLASSES ULTRA LIGHT

The name says it – without attachments it weights only 13 grams. The frame glasses ultra light is manufactured from a mix of titanium, beta-titanium and aluminum. The quick-link for the MEC glas support system and blinders offers flexibility on the highest level. The easy and steady adjustment of all elements allows

the shooter to adjust the glasses individually to each shooting position. The length adjustable and highly flexible side pieces offer the user great comfort through their anatomically formed ends. Upon desire you may use the Ultra light with all current MEC glas nosepieces and MEC glas blinders.

MEC GLAS FRAME GLASSES STARTLINE

The MEC glas frame glasses startline is a simplified version of the frame glasses version. Despite the lower price this light weight offers quality on the highest level and can be upgraded with elements of the MEC glas

system at any time. It is also made of titanium, aluminum and stainless steel and is equipped with spring hinge sides and comfortable silicone sport ends.

MEC GLAS FRAME GLASSES STARTLINE

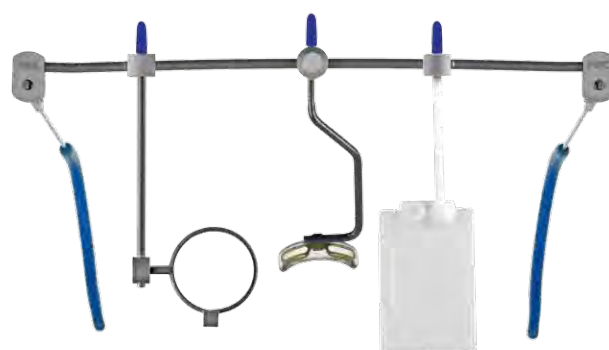

- Available as a right- or left-handed version
- Includes MEC glas support system in 23 mm or 37 mm
- Includes height-adjustable MEC glas nose piece

System upgrades, optional:

- Quick-link for the MEC glas support system
- MEC glas blinder
- All current MEC glas nose pieces
- Length adjustable MEC eyeglas side pieces

MEC GLAS HEADBAND GLASSES

Our MEC glas headband glass is the alternative to the frames glasses version. The low-abrusion material mixture provides the user with extreme wearing comfort and conforms to the Öko-Tex Standard 100. The support is made from a special rubber band and its trimmings of easy-care amaretta.

The Velcro allows adjusting the glasses to the individual's head circumference. The exchangeable terrycloth inlet and the usual system upgrades such as the MEC glas blinders offers additional comfort.

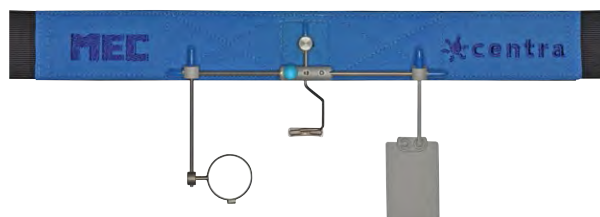

MEC GLAS HEADBAND GLASSES

- Quick-link for the MEC glas support system and blinder
- With MEC glas nose piece as a positioning aid

MONOCLE

From the start of the 2014 season, the official rules permit shooters to mount a lens from a pair of shooting glasses on their rear sights. This rule applies to all classes and all competitions regulated by the German Shooting Sport and Archery Federation.

Because the correction lens stays in exactly the same place in relation to the sighting line, this approach offers

a number of benefits for shooters who use relatively weak lenses and otherwise have no need for spectacles.

As the illustration shows, the Monocle mono-lens holder is fitted between the rearsight and rear iris using the tool supplied. It comprises an adapter fitting, a rod holder with clamping mechanism, a support rod for the lens holder and a lens holder.

MEC GLAS MONOCLE

- This stable and adjustable mounting device is used to fit a lens from a pair of shooting glasses in front of a rear iris
- The lens can be moved closer to, or further away from the eye
- Because the correction lens therefore stays in exactly the same place, perfectly positioned in relation to

the sighting line, this arrangement brings a number of benefits

- MEC glas Holder Adapters for Lens Holders and Lens Holders are 100 % compatible with the MEC glas Shooting Glasses System
- For beginners and professionals

MEC GLAS EXCHANGE NOSE PIECES

MEC glas nosepieces are comfortable and can be adjusted to the anatomical characteristics of the nose. Despite their slender design, MEC glas nosepieces achieve optimum pressure distribution. What's more, the shape of the nosepieces also ensures that the

shooting glasses can be correctly adjusted. All MEC glas nosepieces are of course compatible with all MEC shooting glasses as well as various other brands. All nosepieces are suitable for use in all disciplines.

SEE BETTER WITH JUST ONE SPRAY! TEARS AGAIN

When results start to drop and aiming becomes exhausting, talk soon turns to glasses, front sight and filters. "Have I really got the best solution on the market, or is there something new out there that could give me a clearer view?"

But at those tough times when shooters start to think like this, they often completely forget about the thing that matters most of all – the eye itself! It all comes down to what you expect from it. If you fix your gaze intently on the target, it won't take long before your visual acuity starts to decline. That's because exhaustion will start to set in in the muscles around your eyes and the

chemical reactions in your retina. However, there are a few simple rules that can help to combat fatigue and they are worth memorising:

- Never spend more than 4 – 8 seconds aiming at the target
- Relax your eyes between shots by looking at grey areas without focusing
- Avoid looking at lights or bright surfaces
- Use a visor and blinders to block out disruptive light
- Try a liquid spray to help you overcome fatigue

TEARS AGAIN

Eye spray with natural lipids for the repair of your tear film. Eliminates discomforts such as itching, burning and dry eyes. The spray is simply sprayed onto the closed eyelid. The effect begins after approximately 4 minutes and lasts for 4 hours.

MARK I – CUSTOM SOLUTIONS FOR EVERYONE

The grips in the MARK I range offer maximum adjustment options. The grip can be moved up, down, left, right, forward and back and, thanks to a ball joint, it can also be rotated and tilted freely. The grip is available in three different sizes and its wooden body features an optimum coating – all of which makes it easier for shooters to find the ideal position.

Another detail of the MARK I range is that the stocks can be “disassembled”. The air rifle and smallbore frames can be separated, leaving behind the rear stock and grip with all its setting and adjustments intact and unchanged. This means, for example, that shooters can use a selection of rear stocks when changing between positions or from supported shooting to the standing position. What’s more, thanks to the MEC Mark I Coupling Speed, shooters can change their rear stock in a matter of just a few seconds. This is a major advantage in the finals, when it doesn’t just come down to every tenth, but to time, too.

Stock changeover in merely a few seconds – 1, 2, 3, ready!

A tip from the coach:

Take up your position, close your eyes and focus on your hand and the trigger. Make sure you have a strong enough hold on the grip and feel whether your finger is straight as it reaches the trigger lever. Now, gently increase the pressure on the trigger and then lower it again. Your finger shouldn't change position as you do this. Getting your hand and trigger finger into the ideal position is very important for the stability of your position and the precision of your trigger release. The experts invest hours in getting their grip and trigger blade into the ideal position. Often, they will readjust these positions slightly before a match to take into account their form on the day.

The Support is a hand rest that can be moved forward, back, up and down. However, two separate "rails" can also be moved to the side, so that the width of the rest can be asymmetrically adjusted. These adjustment options ensure the rest can be adapted precisely to the wide range of hand and fist postures that shooters adopt.

Shooters who have been using their rifle for years and spent many intense hours of training and competition time working on it learn to appreciate carefully thought-out elements. Indeed, new solutions that resolve old problems can trigger astonishing progress, making shooting an even more enjoyable and rewarding experience. The MARK I contains just such solutions.

The butt plate, cheekpiece, grip and fore-end stock have all been designed by MEC and centra. They have been specially developed and tested for the new stocks.

We are confident that they offer distinct advantages over existing models and have therefore adapted them to other rifles. Rifle shooting is indisputably a sport where your equipment is crucial. In fact, the increase in scores across all classes is closely linked to improvements in equipment. Even shooters who aren't determined to be the best of the best will still enjoy making progress and being able to hold their own against the competition. In this regard, the stock is an absolutely crucial factor.

Only a stock in the correct proportions will enable a shooter to adopt stable positions and only effective adjustment mechanisms will help him or her react rapidly. It is astounding how often we find that a new stock can eradicate long-standing problems in clubs and teams.

And that in turn unlocks fresh enthusiasm and drive.

AIR RIFLE

MEC MARK I

Standard colour, hard-coated/grey

- Special stock for air rifle standing
- Aluminium and stainless steel; solid, machined and hardened
- Exceptionally adjustable from within the position
- Cheekpiece adjustability, also slides back and forth

NICCOLO CAMPRIANI

Olympic champion 3 X 40 2012

THE MEC VISOR

Shooters often underestimate just how important it is to block out dazzling light and distracting noises during a match. Both these factors are problematic for shooters because they disrupt their concentration, which leads to “slip-ups”, poor reactions and inadequate follow-through. That is why experienced competitors spend a lot of time getting their earplugs, visor and blinders just right as they prepare to compete. However, this act of shutting yourself off from the outside world also has an important psychological effect. It focuses your attention on what really matters and pushes everything else into the background

Shooters who clean the barrel of their air gun very thoroughly – using chemicals and a brass brush, for example – should expect that they will have to fire 20 – 30 shots afterwards before they regain optimum accuracy. Consequently, you should carry out such drastic treatments before a training session.

BARREL CLEANING

Air rifle and air pistol shooters often completely underestimate how important it is to clean the barrel of their gun. To cover all eventualities, you should make it second nature to clean your gun after every shooting session, before you pack it away. Felt mops are the best thing to use because, once you’ve pulled them through, you can

clearly see whether the inside of your barrel is spotless. The most sensitive part of your barrel is the muzzle, so never clean from the front without taking precautions!

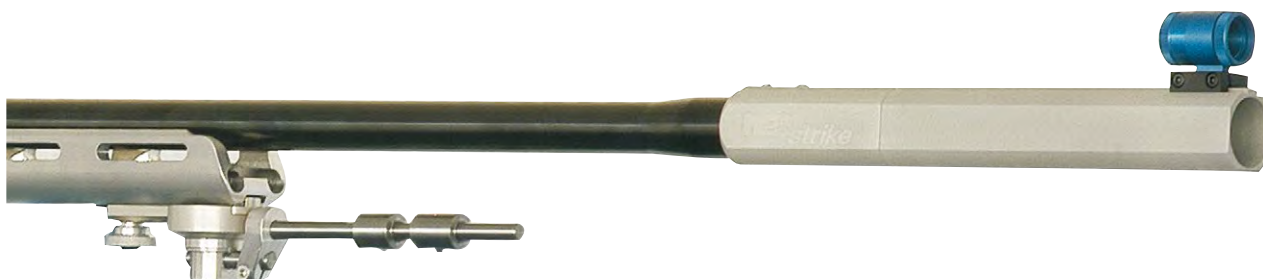

TRAINER TIP

A tip from the coach:

An ammunition test is a good opportunity to get to know how best to clean your gun. First, let a good amount of dirt accumulate by leaving your barrel uncleaned until you’ve fired 200 shots, then shoot 1 – 2 shot groups at the test range. After that, clean your barrel, looking very closely at the first three mops. Next, shoot two more groups with the same ammunition and compare the results with the shot groups from earlier. Many shooters think that tight-fitting cleaning aids are more effective. However, in our experience, there is little to be gained from being very forceful. A moderate and even force is quite enough. One thing is certain: When it comes to the highest scores – like those notched up by the very best shooters and in supported shooting – cleaning is a decisive factor. Every second shot that lands on 9.9 could be down to dirt...

BARREL EXTENSIONS

The longer a pendulum is, the slower it swings from one extreme to the other. The heavier it is, the more stable its path. Those are two simple rules of physics. A barrel extension is a mechanical means of transferring these principles to a rifle. Variable weights allow shooters to fine-tune the effects to suit their requirements. Even minor changes to the length and weight of the sleeve can have astonishing effects. In fact, it is an option that no competitor should ignore. Indeed, when it comes to supported shooting and the prone position, every gram that a shooter can add to his muzzle counts.

If at all possible, you should use SCATT so that you can closely inspect the final stretch of the green trace and the yellow trace. The ideal ratio of horizontal movement to vertical movement is around 100 to 80. If you find you're moving further to the sides, you should add some weight to your muzzle. If you find you're losing height too quickly, take some of the weight off. In smallbore shooting, particularly in the prone position, virtually all shooters use an extension sleeve.

Unfortunately, standard products rarely meet expectations, so much so that the best shooters almost always use 'home-made' solutions. Until now, special solutions such as these have been very expensive and time-consuming. The sleeves are usually also very complicated to clean and fit.

After a lot of in-depth experimentation, MEC has developed a highly practical high-precision sleeve – the **MEC Berta II**. The framework is fixed firmly in place just once and the sleeves that are inserted into it are easy to clean. There is plenty of space in your case.

If you experience a lot of side-to-side movement, or your shot groups show a clear horizontal distribution, it is well worthwhile experimenting with a weightier barrel.

FOR RIFLES

MEC CONTACT III

- Classic mature in silence
- Adjustable in every position
- Both wings turnable
- Very good hold
- Rounded edges
- Good accessible screws
- Revised version
- Fits all current match-rifles

5000054

RRP in Euros: 169.00

MEC CONTACT IV

- The classic has been modified to fit the new generation
- A hand adjustable screw enables vernier height adjustment
- Additional joints allow for variable adjustments
- Wing forms are exchangeable
- Wings are fully adjustable and revolable
- The natural uncured rubber knops allow for perfect grip
- Compatible with all common match rifles
- Suitable for the following disciplines: offhand air rifle, 3-position and shooting air rifle off a rest
- With MEC Hook expandable

5000062

RRP in Euros: 348.00

IVANA MAKSIMOVIC

2nd place 2012 Olympics

THE SCATT SYSTEM

Thanks to its lightweight sensor and outstanding program, the SCATT system is more than suitable for pistol shooters. More and more air pistol shooters are trying it out and training with SCATT at MEC in Dortmund.

The SCATT sensor weighs just 28 grams, making it a true lightweight among electronic trainers. With programs for the AP, FP, SP, RFP and many more disciplines besides, it is the leading system worldwide. Today, no really good coach works without an electronic trainer. It's time to find out more about computer-aided training – at the range and at home.

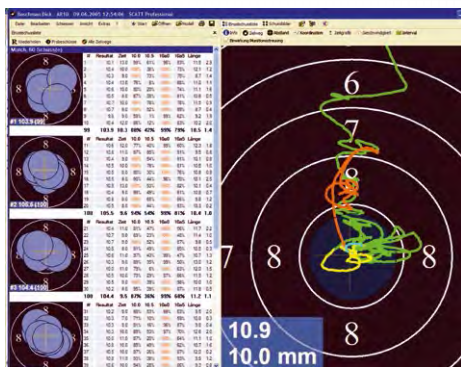

SCATT is an ideal tool for learning and monitoring the very delicate and technically complex aiming process. Aiming traces leave you in no doubt as to where your pistol was pointing at any one time, and playing back your shot also reveals every detail of the process. As a result, you can answer a lot of questions by experimenting: What size of front sight should I use? How wide should my rear sight be? What distance from the target centre produces the most accurate aiming processes? How long can I see the target image in sharp focus and when does my visual acuity start to deteriorate?

You can answer all these questions through experimentation, whether shooting live at the range or dry at home (from 4 metres!). Consistent dry firing exercises will give you confidence in your hold, aim and trigger release. The more often and longer you work with your pistol at home, the better your performance will be in live training and in matches. What's more, an electronic trainer will make your homework a lot more fun and a lot more efficient. And because you are practising under near-real conditions, it's much easier to stay motivated. The traces also show you what you're doing right and what you're doing wrong. Shooters can stabilise their strength, their muscle sensitivity and the consistency of their aim and trigger release at home – saving themselves time, travelling and ammunition.

Your aiming trace can also help you answer questions about your equipment: How much weight can I add to help me hold my gun more steadily? What balance will keep my recoil to an absolute minimum during the trigger release?

SCATT MX-02

Several decades of highly skilled fine-tuning have resulted in a training system of unparalleled quality.

SCATT MX eliminates the need for hardware on the target. It is another leap forward. A paper target and a PC with a USB interface are all that you need.

Whether you are a beginner, advanced or professional shooter – if you can see your trigger release, you can improve it.

Tried-and-tested SCATTPRO software provides a unique mapping system for sophisticated analysis.

Only 36 g, from 3 – 300 m
– Live and dry

The ingenious attachment system fits virtually all diameters, whether round or rectangular.

Suitable for:

- Air rifles and pistols
- Small-bore rifles and pistols
- Full-bore rifles and pistols
- Bows

SCATT MX-02 UNIVERSAL

Training system for static targets

- System suitable for dry and live firing
- Designed for both indoor and outdoor use
- System works with all conventional targets and electronic scoring targets (such as Meyton, Sius-Ascor, Disag, Häring)
- No risk of damaging an expensive piece of equipment when training with ammunition

Scope of supply:

- MX-02 optical sensor for 10, 25 and 50 metres
- Mounting kit for the optical sensor
- Connecting cable

5000285

RRP in Euros: 1699.00

SCATT SETS

SCATT WS1 PROFESSIONAL

Computer-controlled aiming path analysis (infra-red system) for almost all sporting rifles and pistols. For home training (dry) and live firing with airguns.

Included in the system area:

- Measuring frame with insert for air rifle targets, exact measurement from 4 - 12 metres
- Connecting cable for the PC (also for the power supply), Processor with connecting cable
- Wireless Sensor (only ca. 30 g) with USB charging cable and 5 fixing bands for all barrel diameters
- Programme on CD, handbook and installation instructions

- Clear menu structure, easy calibration
- No 25 / 50 metre target accessories available

Minimum system requirement:

Menu-driven through Windows, wide-ranging data processing and storage
 Minimum system requirement:
 IBM-compatible PC, 350 MHz processor or higher, 32 MB RAM, CD-ROM drive, SVGA monitor (800 x 600 16-bit colour), 2 free USB ports. Windows: 98, 2000, ME, XP, Vista, Win 7, Win 8. Internet Explorer 4.01 or later version.

5000272

RRP in Euros: 1349.00

SCATT USB PROFESSIONAL

Computer-controlled aiming path analysis (infra-red system) for almost all sporting rifles and pistols. For home training (dry) and live firing with airguns. Included in the system are:

- Measuring frame with insert for air rifle targets
- Connecting cable for the PC (also for the power supply)
- Processor with connecting cable
- Sensor (only ca. 30 g) with connecting cable and 5 fixing bands for all barrel diameters
- Programme on CD, handbook and installation instructions
- Exact measurement from 4 - 12 metres, easy to use

- Clear menu structure, easy calibration
- USB connection
- Menu-driven through Windows, wide-ranging data processing und storage

Minimum system requirement:

IBM-compatible PC, 350 MHz processor or higher, 32 MB RAM, CD-ROM drive, SVGA monitor (800 x 600, 16bit colour), 2 free USB ports. Windows: 98, 2000, ME, XP, Vista, Win 7, Win 8. Internet Explorer 4.01 or later version.

5000274

RRP in Euros: 1099.00

SCATT USB PROFESSIONAL BIATHLON

National teams, beginners and improvers all train with Scatt USB Biathlon. 5 shots with aiming path, 'sound' and further details concerning hold, aim and release can be recorded / displayed. In the club or in the garden at home, you can realistically and precisely rehearse the many fine points of sequential shooting at falling-plate

targets. Guaranteed fun for all who want to have a go, but also an unforgiving training partner for the best professionals.

RRP in Euros: 1199.00

5000312 . Wireless

RRP in Euros: 1399.00

SCATT ACCESSORIES

SCATT USB BIATHLON-TARGET

The 5-shot frame on its own, as an extra to an existing Scatt USB professional. Can be simply connected and driven with the standard software.

Biathlon is in trend, who wouldn't want to learn how to flatten 5 targets in double-quick time? A blessing for youth leaders, club presentations, children's birthdays and christmas shoots. In combination, for example, with our self-loading Scatt-rifle.

5000294 . USB

5000312 . Wireless

RRP in Euros: 589.00

SCATT TRIGGER SENSOR WTS

- Pressure sensor on the trigger
- Obtain information about the effort which the shooter presses the trigger
- The sensor made as a trigger with detachable cable, which attached to sport weapons instead of regular
- Trigger sensor connected to USB port of WS-03 optical sensor
- Information from the pressure sensor graphically displayed in a SCATT software window
- Connects to the control unit. Valid rod diameter for mounting the trigger is from 2 - 5 mm

5010066	WTS-TRR	round
5010067	WTS-TRL	round for left-handers
5010068	WTS-TSR	straight
5010069	WTS-TSL	straight for left-handers

RRP in Euros: 265.00

SCATT TRIGGER SENSOR STS

- Pressure sensor on the trigger
- Obtain information about the effort which the shooter presses the trigger
- The sensor made as a trigger with detachable cable, which attached to sport weapons instead of regular
- Trigger sensor connected to USB port of OS-02 optical sensor
- Information from the pressure sensor graphically displayed in a SCATT software window
- Connects to the control unit. Valid rod diameter for mounting the trigger is from 2 - 5 mm

5010070	STS-TRR	round
5010071	STS-TRL	round for left-handers
5010072	STS-TSR	straight
5010073	STS-TSL	straight for left-handers

RRP in Euros: 295.00

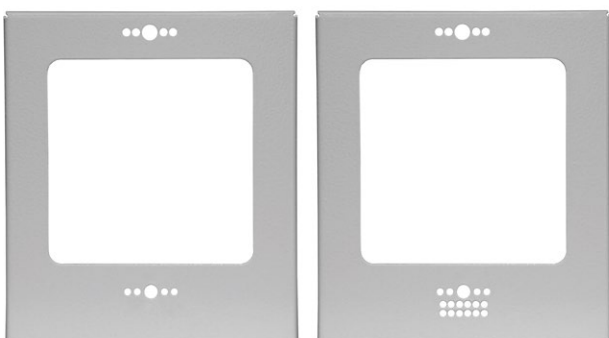

SCATT SENSOR WS-M02 WIRELESS

- Model: WS-M01
- Fixed into barrel of 9 mm caliber pistol
- Highly accurately measures the weapons alignment during aiming and actuation of the trigger mechanism
- Optical sensor automatically measures the distance to the electronic target
- The program allows you to automatically calibrate the sensor
- Weight 6 g

5000260

RRP in Euros: **580.00**

SCATT TARGET PROTECT

- 1.5 mm steel
- Powder-coated in colour light-grey
- Protects the frame against unwanted bullet hits and prevents bullet from bouncing back

5009980 . USB

5009981 . Wireless

PETRA ZUBLASING
LG World Champion 2014

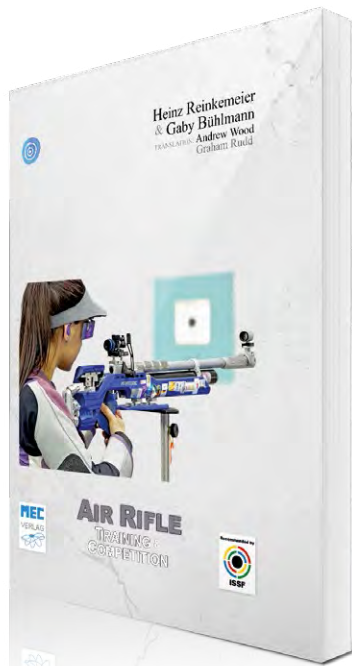

LITERATURE AND MORE

In terms of technique and technology, shooting is one of the most complex sports. It takes years and decades to get to grips with all the details of shooting position, aiming and the trigger release. However, shooters can considerably reduce this time by getting access to the right information structured in the right way. And that's where an instructional book is still the best solution.

We have been designing and producing instructional books for shooters for 30 years. We currently have 6 German-language titles in publication that cover a range of topics such as air rifle shooting, smallbore shooting and the psychological aspects of shooting (and golf). A growing number of our books are also being translated into English and other languages. For example, hot off the press is our latest edition of "Air Rifle Shooting" – now published under the title "Air Rifle – Training and Competition".

Instructional posters are another method used to provide information quickly and concisely. Designing and producing a good instructional poster is a particularly challenging task. It has to present all the relevant information in a very limited space. Most important are clear pictures and drawings that provide a clear depiction of the main points at a glance. The pictures are accompanied by short texts that explain further details. Finally, the poster needs to work as one cohesive piece, so that it looks good on the wall at the club.

AUTHORS

Endless debate and weighty discussions are characteristics of the way our books come into being. The fact that we finally still manage to bring them to print speaks for a willingness to compromise which still somehow keeps on functioning even after long years of working together. The basic rule? Gaby always gets her own way...

HEINZ REINKEMEIER, Diploma in Psychology, coach, author and designer. Has written 7 books on the subject of target shooting, made several videos and published articles in a number of sport-related magazines.

GABY BÜHLMANN, Diploma in Psychology and coach. European Champion 1997, competed at the Olympics from '88 - '04. Among the athletes she coaches are air rifle world champion Abhinav Bindra, Olympic silver medallist Valentina Turisini and the Italian national team.

MAIK ECKHARDT, Businessman. Olympic athlete '96 - '04; fourth (prone) in Sydney, fifth (air rifle) and sixth (prone) in Athens. 04. Co-owner and managing director of MEC.

RRP in Euros: 44.80

PISTOL SHOOTING

All you need to know about the sport of pistol shooting. 1st English edition, 2013, 224 pages, colour, over 1,200 photos, illustrations and graphics. Includes pictures of top international athletes in action and detailed studio shoots with experts including world champion sport pistol shooter Munkhbayar Dorjsuren, Olympic free pistol champion Uwe Potteck and three-times Olympic RFP champion Ralf Schumann.

Contributions from German national coaches Peter Kraneis and Barbara Georgi and 17 other outstanding trainers and shooters from around the world. A detailed presentation of all the relevant aspects of training and competition. Divided into sections on technique (precision and rapid-fire), training, tactics, psychological factors and guns. Other topics include the German national league, youth training, supported air pistol, aiming path systems, ammunition testing, mental training, coaching, etc. Theory and practical recommendations and exercises are covered for each topic. A book for shooters at all levels, trainers, coaches and all pistol shooting enthusiasts.

THE PSYCHE OF THE SHOT

Sport Psychology and Competition

In decisive moments, it's our psyche that tips the balance. Whether you achieve your goal or not is dependent on your thoughts and feelings, and on your behavior most of all.

This book is a guide to how you can systematically prepare for tournaments and other stressful moments. It contains 1,000 pictures, 200 exercises, a 6-week training plan and audio files on the techniques of psychological regulation.

CD RELAX PROGRAM FOR ATHLETES

Audio-CD with Training Plan

First edition August 2005

Five exercise sequences for relaxation over a total of 90 minutes, with training plan.

The updated version of the legendary tapes from the 80s. Generations of shooters have learned muscular, autogenic and breathing relaxation from these exercises. Two further exercises with synthetic soundrhythms create relaxation and arousal. This CD has been used successfully in clinics and therapeutical practices as well as for all-round use in daily life.
